EATING RIGHT CAN HELP REDUCE THE RISK OF CANCER.

It can also help you reduce your weight.

And since a 12-year study shows that being 40% or more overweight puts you at high risk, it makes sense to follow these guidelines for healthy living!

Eat plenty of fruits and vegetables rich in vitamins A and C—oranges, cantaloupe, strawberries, peaches, apricots, broccoli, cauliflower, brussel sprouts, cabbage. Eat a high-fiber, low-fat diet that includes whole-grain breads and cereals such as oatmeal, bran and wheat. Eat lean meats, fish, skinned poultry and low-fat dairy products. Drink alcoholic beverages only in moderation.
